Manifold LLC

NORTHERN VIRGINIA · TS/SCI WITH CI POLYGRAPH

Independent AI/ML guidance for Intelligence Community program offices.

Our founders have spent their careers inside IC acquisition offices and research programs as trusted agents and SETA engineers, on the government's side of the table. We help program managers decide what to buy, what to build, and how to get it running on the high side. When the answer is build, we build, never for a customer we also advise.

TRUSTED-AGENT AND SETA EXPERIENCE · SMALL BUSINESS · UEI C6P2G6PQLEB8 · CAGE 23X60 · SENIOR STAFF DO THE WORK

ADVISORY, SETA AND R&D SERVICES

Strategy and roadmaps 01

Where foundation models fit in a portfolio, and how to put them to work. Build-versus-buy analysis a program manager can defend at a review board.

Acquisition support 02

Requirements vendors can bid against, RFP and SOW language, source-selection criteria, and evaluators for acquisitions and BAA panels.

Compute and cost 03

GPU and TPU cluster sizing and cost models against real workloads, in AWS GovCloud, Azure Government, Google Cloud, or on hardware you own.

Program assessment 04

An outside technical read on an AI program: where it stands, what finishing takes, and whether the metrics mean what they seem.

Secure generative AI 05

Architectures and vendor selection for language-model systems handling CUI at IL4 and IL5, plus the evaluation plans accreditation asks for.

Training and briefings 06

AI/ML curricula for customer staff, analysts to senior leadership, and the technical briefings behind investment decisions.

Applied research and development 07

When the answer is build: detectors and trackers over satellite imagery, and foundation models pretrained on customer data.

WHERE WE SIT IN THE ACQUISITION CYCLE

Need and strategy	Requirements	Source selection	Execution	Assessment
Roadmaps, build-versus-buy, technology forecasts	Technical requirements, RFP and SOW language	Evaluation criteria, evaluators, BAA panels	Cost models, design reviews, vendor checks	Independent evaluation, metrics, training

Why Manifold

Both sides of the table. One founder served as a trusted agent to an Intelligence Community agency; the other led a SETA team supporting an applied R&D portfolio. Between them: requirements, source selections, BAA panels, training, leadership briefings.

We build the models too. Our founders have been the inventors and leads of several advanced foundation models developed for the IC and DoW. When a vendor says its model does something, we can check.

How we work

The people you meet do the work. The practitioner who scopes an engagement does the work. Written scope, tangible deliverable, realistic timelines.

No conflicts of interest. We separate advisory and implementation work and never compete for contracts we help shape or evaluate. We take no vendor fees.

Cleared. Everyone at Manifold holds TS/SCI with CI polygraph and actively supports the Intelligence Community.
