Manifold LLC

NORTHERN VIRGINIA · TS/SCI WITH CI POLYGRAPH

Independent AI/ML advice for Intelligence Community program offices.

Our people spent about ten years each inside IC acquisition offices and research programs as trusted agents and SETA engineers, on the government's side of the table. We help program managers decide what to buy, what to build, and how to get it running on the high side. When the answer is build, we build, never for a sponsor we also advise.

FORMER TRUSTED AGENTS AND SETAS SMALL BUSINESS · UEI C6P2G6PQLEB8 · CAGE 23X60 SENIOR STAFF DO THE WORK

ADVISORY AND SETA SERVICES

Strategy and roadmaps 01

Where foundation models fit in a portfolio, and where they do not yet. Build-versus-buy analysis a program manager can defend at a review board.

Acquisition support 02

Requirements vendors can bid against, RFP and SOW language, source-selection criteria, and evaluators for acquisitions and BAA panels.

Compute and cost 03

GPU and TPU cluster sizing and cost models against real workloads, in AWS GovCloud, Azure Government, Google Cloud, or on hardware you own.

Program assessment 04

An outside technical read on an AI program: where it stands, what finishing takes, and whether the metrics mean what they seem.

Secure generative AI 05

Architectures and vendor selection for language-model systems handling CUI at IL4 and IL5, plus the evaluation plans accreditation asks for.

Training and briefings 06

AI/ML curricula for sponsor staff, analysts to senior leadership, and the technical briefings behind investment decisions.

WHERE WE SIT IN THE ACQUISITION CYCLE

Need and strategy	Requirements	Source selection	Execution	Assessment
Roadmaps, build-versus-buy, technology forecasts	Technical requirements, RFP and SOW language	Evaluation criteria, evaluators, BAA panels	Cost models, design reviews, vendor checks	Independent evaluation, metrics, training

WHAT MANIFOLD PROVIDES AT EACH STAGE

Why Manifold

Both sides of the table. One founder has served as a trusted agent to an Intelligence Community agency; the other leads a SETA team for a national security program. Between them: requirements, source selections, BAA panels, training, leadership briefings.

We build the models too. Our founders have been the inventor and lead of several advanced foundation models developed for the U.S. government. When a vendor says its model does something, we can check.

How we work

The people you meet do the work. The practitioner who scopes an engagement does it and briefs it. Written scope, fixed deliverable, a few weeks to a few months.

No conflicts of interest. We advise or we build, never both for one organization. We do not compete for work we helped specify, and we take no vendor fees.

Cleared, unclassified by default. Classified work happens on customer premises under the customer's or prime's contract.
